SUMMARY

03 **Introduction**

04 **Challenge + Solution 1:** Migration of legacy systems

05 **Challenge + Solution 2:** Increasing adoption, especially in regulated markets.

08 **Challenge + Solution 3:** Digital maturity and automated processes

09 **Challenge + Solution 4:** Costs and deadlines

10 **Invitation to take the Assessment**

INTRODUCTION

The adoption of SAP S/4HANA, as well as migrations of environments to the cloud, is advancing at an accelerated pace.

Never before have so many companies been simultaneously in the planning phase for the next two years.

With the experience gained by those who have already completed this process, the risks are increasingly controlled.

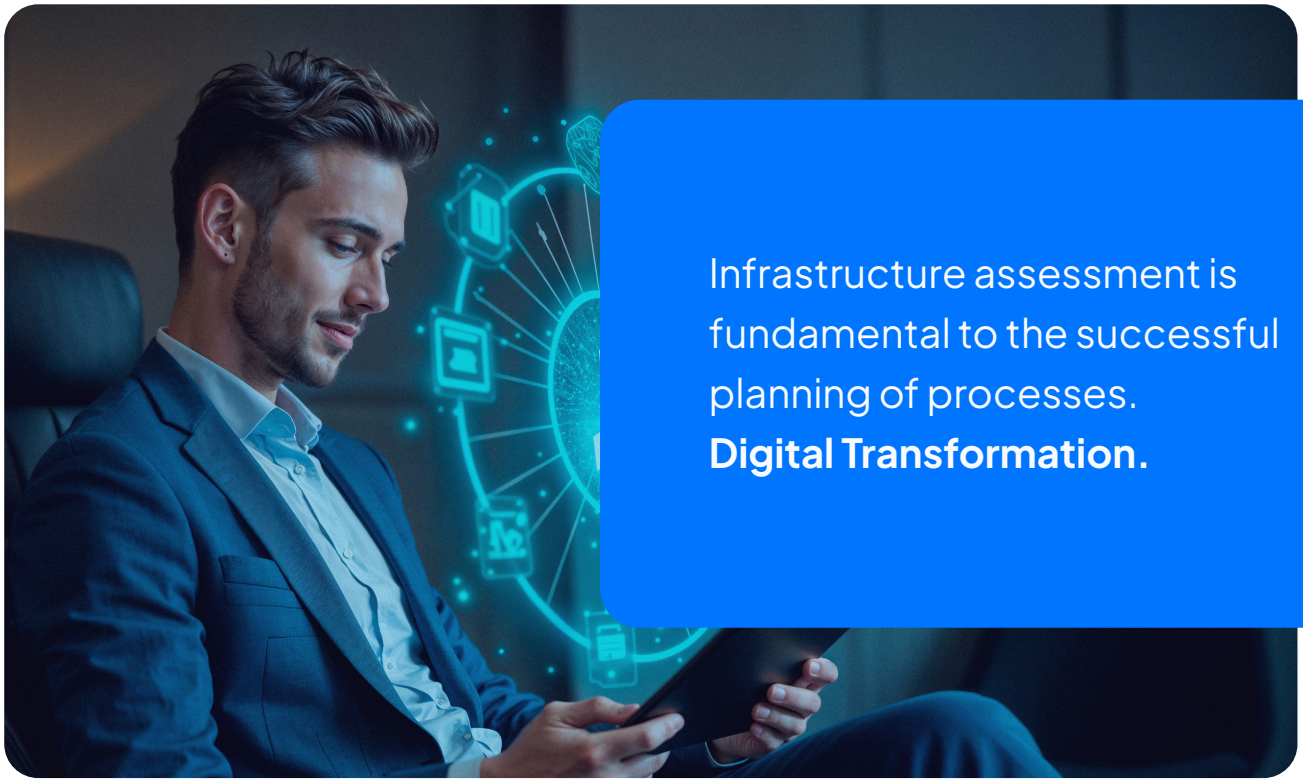

The next step, therefore, is to optimize the use of the platform to capture real business benefits, overcoming challenges such as resource scarcity and the difficulty in achieving the full expected value.

Therefore, Seidor Brasil has partnered with SoftExpert to present new solutions.

Keep reading and discover four alternatives:

- **Reduction** in project cost
- **Reduction** in project time
- **Increased** adoption of SAP technology.
- **Expanding** opportunities for Saving e ROI.

Seidor All-In-One's strategic services offering supports companies in planning, executing, and sustaining their migrations with security, agility, and financial return.

Infrastructure assessment is fundamental to the successful planning of processes. **Digital Transformation.**

CHALLENGE

01

Migration of legacy systems

The transition to SAP S/4HANA may require technical effort due to the re-engineering of the new version of the HANA product. Furthermore, the challenge increases with the migration of customizations and legacy systems.

A detailed analysis is essential to avoid performance risks, data inconsistencies, and rework during production.

SAP is the transactional backbone:
It is the core system for a company's critical transactional processes (such as finance, logistics, production, etc.).

Therefore, a new version of it will require the elimination of legacy systems, which significantly impacts time, investment, and adherence to business processes.

How can we solve this challenge?

SAP customers may consider SoftExpert's complementary and integrated solutions as a more flexible, low-code, user-friendly alternative with faster implementation than acquiring or customizing complex SAP modules for non-core ERP functions.

With SoftExpert Suite solutions, you eliminate the need for customizations and increase the adoption of the Seidor service.

Therefore, your company can reduce investment – both in time and money – by migrating its system or migrating to the cloud.

Seidor's All-In-One offering can generate cost and TCO estimates, through an assessment, for moving all or parts of your infrastructure to the cloud.

CHALLENGE

02

Expanding adherence in regulated markets

Each region and/or country has its own regulations that may hinder proper migration or even expansion into existing markets.

Furthermore, the absence of clear standards in these governance integrations can compromise the reliability of the process and increase the risk of failures.

Even when using SAP S/4 HANA, which is a global management system that incorporates best market practices, restrictions may arise in complying with localized and specific regulations of each region/country.

How can we solve this challenge?

Seidor now has a partner who is an expert in compliance, and governance.

This helps adapt your company to global standards and regulations – from traditional ISOs to the complex regulations of the American FDA, for example.

For companies seeking to elevate their service, governance, and compliance levels, Seidor, in partnership with SoftExpert, offers dedicated tools that complement SAP's transactional capabilities.

This ensures that SAP data is used and processes are executed within a rigorous governance framework.

If the migration is being accompanied by compliance and audit projects, proper data management will be essential to avoid legal and tax risks.

CHALLENGE

03

Digital maturity and automated processes

Migrating to SAP S/4HANA and migrating environments to the cloud are not just technological; they also involve significant organizational transformation, aiming for maximum operational efficiency based on process standardization and measurement.

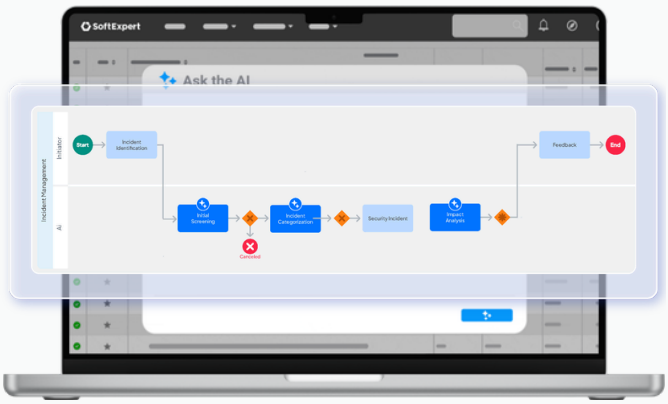

The design of processes, their measurement with indicators, the monitoring of deviations from established standards and metrics (such as the management of actions aimed at improving maturity and operational efficiency), and their dissemination across all departments of the business are the basis for success.

How can we solve this challenge?

SoftExpert offers dedicated tools that complement SAP's transactional capabilities, ensuring that business processes evolve in tandem with the use of the system.

Through SoftExpert solutions, your company will be able to monitor the project and the entire business in a unified and fluid way, generating efficiency through automation and reducing friction.

This can even be done by integrating AI agents into the business workflow, while maintaining governance and traceability of actions.

CHALLENGE

04

Reduce costs and deadlines

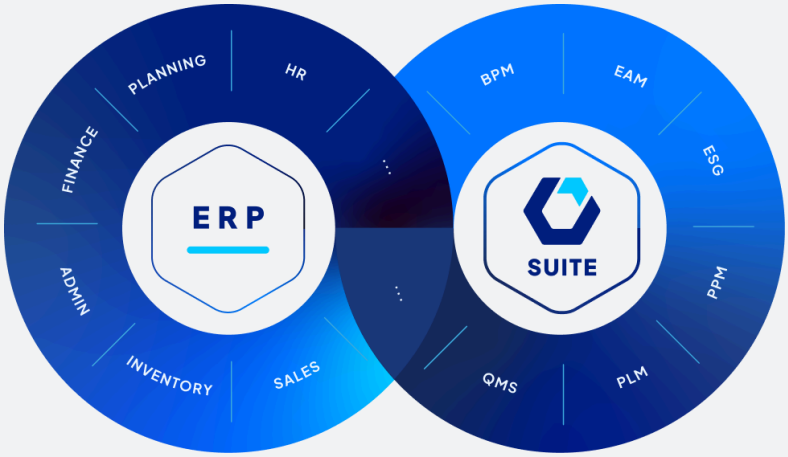

Migrations require planning, as they involve a dedicated budget not only for licensing and infrastructure, but also for consulting, process reimplementation, customization review, and team training.

These investments are often larger than anticipated, making the overall cost one of the main obstacles to deciding on and executing the digital transformation journey. But this changes when you adopt solutions that can support your company in reducing costs by up to 30%.

How can we solve this challenge?

Instead of your company investing in various niche tools for each need (such as a non-conformity management system, one for document management, and another for risk management), While SAP modules can be too robust and expensive for specific needs, SoftExpert offers specialist modules that can be easily integrated with the ERP system.

This reduces the total cost of ownership (TCO) because it consolidates licenses, infrastructure, integrations, and support into a single, truly all-in-one integrated system.

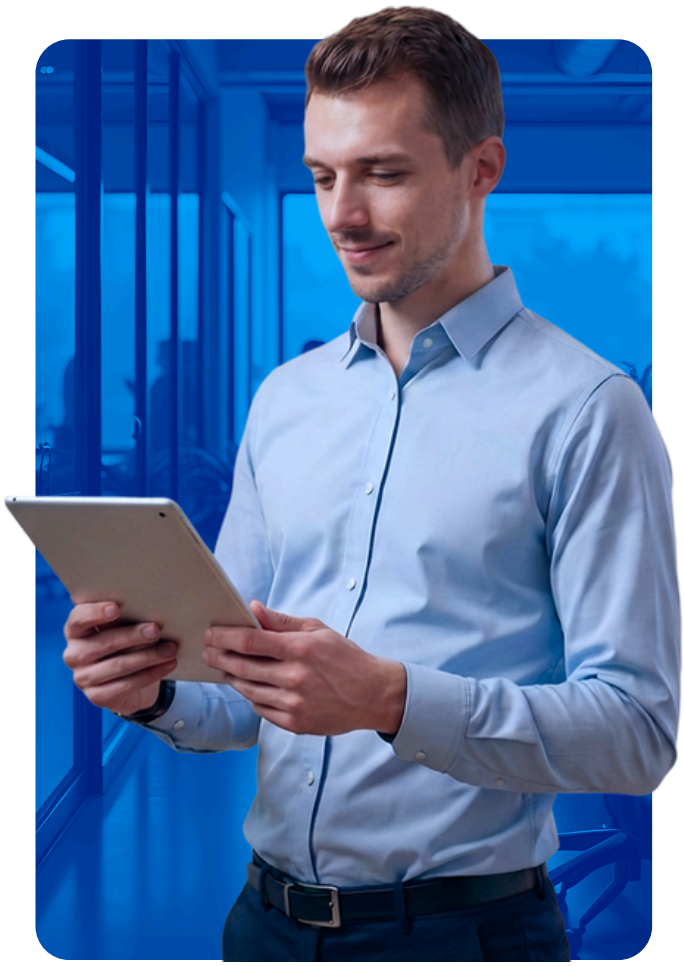

Migration **to the cloud**

- Reduces costs;
- Increases agility;
- Drives new innovative services.

Ready to take the next step on the journey of **Migration to SAP S/4HANA or cloud environment migration?**

Speak with experts from **Seidor Brasil and SoftExpert and conduct a digital maturity assessment.**

As a result, you will have relevant information to support the planning and digital transformation of your company.

READY FOR THE NEXT STEP?

Let's go together

- **Map** your needs
- **Identify** risks
- **Opportunities** for improvement
- **Cost** reduction

To build a solid and efficient migration plan.
